

STU Phase 2 Change Document – 02.06.14

Reports 1 & 2 have been merged and renamed 'Dashboard'.

'No. of patients prescribed repeat items' chart now also shows the practice population.

Y-axes set to zero.

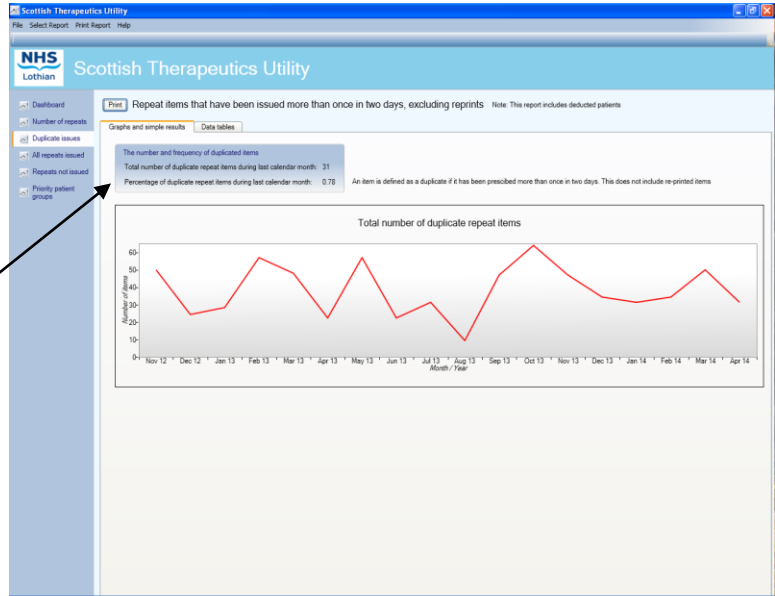

Report 3 has been renamed 'Number of repeats'.

Results can now be filtered by age. Select the age band required and click on "Recalculate".

Report 4 has been renamed 'Duplicate issues'.

This report can no longer be recalculated by changing the period end date, and will always show the trend over the last 18 months.

The stats in the blue box now show the last full calendar month, instead of the last 28 days.

The screenshot shows the 'Scottish Therapeutics Utility' application window. The main title bar includes 'NHS Lothian' and 'Scottish Therapeutics Utility'. Below the title bar, there are navigation options: 'Dashboard', 'Number of repeats', 'Duplicate issues', 'All repeats issued', 'Repeats not issued', and 'Priority patient groups'. The 'Repeats not issued' option is selected. The main content area displays a table titled 'Number of repeat items not issued'. The table has columns for Surname, Forename, DOB, Item name, Dosage, Quantity, and Last issued. The table lists various patients and their medication details.

The screenshot shows a 'Medication Review' dialog box. The title bar reads 'Medication Review'. The main text area contains the following information: 'Read code: 8BM.. Other medication management'. Below this, it says 'Please give details of the action required:' followed by a large empty text box for input. At the bottom of the dialog box, there are two buttons: 'Cancel' and 'Ok'.

By right clicking on the patient's name you can add an agreed medication management read code into the patient's record in Vision. You should enter details of the action required in the pop-up box that appears.

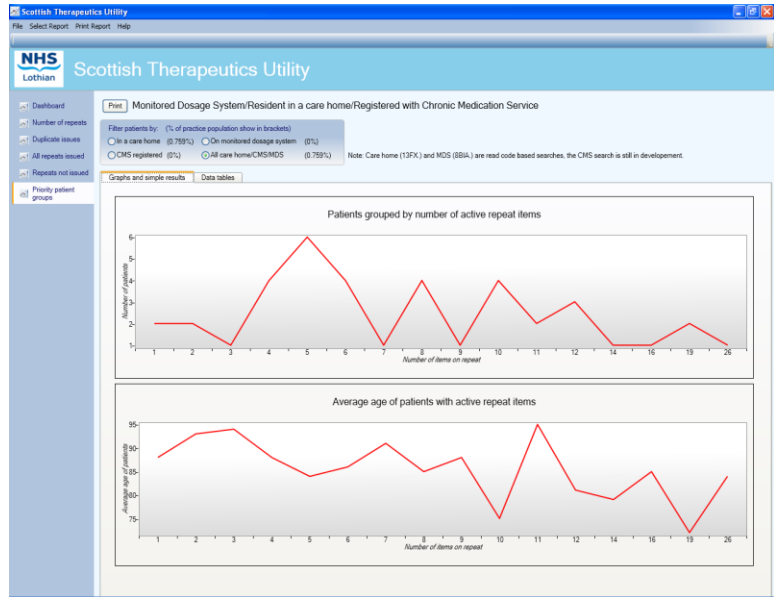

Report 7 (Active repeats never issued) has been removed and replaced with an alternative new report that seeks to identify “priority patient groups”.

This provides a report of all the patients coded as resident in a care home, on a monitored dosage system, and registered with the Chronic Medication Service (CMS).

Care home (13FX.) and MDS (8BIA.) are read code based searches.

Please note: the CMS search is still in development, and does not return any results at this moment.

Results can be filtered by each individual category, or all categories.

The screenshot shows the 'Scottish Therapeutics Utility' interface with the 'Data tables' tab selected. The table 'Patients grouped by number of active repeat items' is displayed. Below it is a patient grid with columns: Surname, Forename, Date of birth, and Pharmacy. An arrow points to the entry for ROMAN, who is associated with Great Glen Pharmacy.
