

Diabetes

Health boards are being encouraged to provide a high quality of diabetic care for as many patients as possible in a community setting in line with the principals of 'Delivering for Health', whilst ensuring appropriate access for all patients to see specialist services when required.

The Escro Diabetes module is designed to assist practices in providing quality assured diabetes care by adhering to local MCN guidelines. The most complex monitoring system we have developed to date, this module implements a four tier payment system covering both screening and management requirements.

Providing comprehensive and detailed summaries for each patient This Escro module is invaluable to practices when managing a complex and growing patient group.
